The Unimark Pedestrian Crossing Machine is a hand pull machine applying screed thermoplastic panels in widths according to individual specification but typically 70 cm wide. The propane gas heated tank will apply one panel per fill at 3 mm thick. An adjustable glass bead dispenser is fitted for instant retroreflectivity. The machine is designed to give very neat single application panels for a professional finish to pedestrian crossings.

Unimark operates on policy of continual research and development, therefore specifications can change without notice. Photographs are only representative.
