The machine will apply the proven and long lasting original raised rib thermoplastic profiled line. The unique and original Unimark pneumatic system gives automatic rib spacing on the base line in a single application. The profile laying shoe is connected to the delivery tube with our quick change rotary connection which also allows the shoe to follow any road contour deviations. With a tank capacity of 65

liters approximately 85 meters of 20 cm wide rib line per fill is available. The standard pneumatic system will apply ribs at 25 and 50 cm spacing but other systems can be supplied. The pneumatic system requires the supply of a compressed gas cylinder such as oxygen free nitrogen or similar, or alternatively our model Unidrive can be attached, please see details.

Unimark operates a policy of continual research and development, therefore specifications can change without notice. Photographs are only representative.
